

We are seeking a Postgraduate Research Associate for a position to join our team in the Yale AIDS Program at the Yale School of Medicine. The candidate will conduct/coordinate a research project focused on using digital phenotyping to track drug use and overdose among people who use drugs (PWUD). Other research projects relating to HIV/AIDS and PWUD/PWID may be included. The position is suitable for an early career public health professional seeking additional training in clinical research; graduates from the Class of 2023 are welcome to apply.

We seek candidates with the following attributes:

- Passion for increasing equity and engaging with vulnerable populations
- Operating studies, including: questionnaire development, IRB protocol management, coordinating schedules, interviewing, analyses, tracking and managing data, and publication writing
- Excellent teamwork and communication skills

The ideal candidate should have completed a graduate program in a health-related field (e.g., MPH, Health Promotion, Psychology), but has not yet received a doctoral degree and is seeking advanced scientific training for a duration of 1 year, with possible extension to include a second year of training. Prior clinical research experience, particularly with people with substance use disorder, is a plus but not required. The Postgraduate Associate position is one year in duration, with a salary of \$38,069.

The position is full time and in-person in New Haven, Connecticut. Ideally, we are looking for someone who would be able to start as soon as possible, but there is some flexibility.

Please direct any questions or applications to Roman Shrestha, at [roman.shrestha@yale.edu](mailto:roman.shrestha@yale.edu), and cc Jeffrey Wickersham, at [jeffrey.wickersham@yale.edu](mailto:jeffrey.wickersham@yale.edu). Complete applications require a CV and brief statement of intent or cover letter.
